04	Higgsfield is your studio; the business pays for the finished video
05	AI receptionists and automations sell revenue a business already loses
06	AI ads, AI visibility and content win as a bundle, not alone
07	Faceless brands pay slowly, and only YouTube pays BiH residents directly
08	A low-ticket product needs roughly a million views to matter
09	Fifty-three ideas, ranked by market fit
10	Bosnia's late start is an edge if you price for two markets
11	Getting paid from BiH takes two rails and a registered business
12	The sales kit: messages, free samples, tiers and objections
13	Worked income scenarios: 1,700 KM to 12,900 KM a month
14	Of five Skool communities, one is worth joining now
15	Ninety days from zero to recurring revenue
16	Hype, rules and risks to price in before you start
17	Conclusion

Every figure links to its source. Research ran on web-search summaries of the cited pages; treat prices as an October 2026 snapshot. Currency: 1 EUR = 1.95583 KM (fixed peg); USD conversions assume \$1 ≈ €0.87 ≈ 1.70 KM.

The short version

A beginner in Bosnia and Herzegovina makes the most money with AI by **selling finished results to businesses**: short AI video ads and content packs, AI receptionists and WhatsApp bots, "get recommended by ChatGPT" visibility fixes, and AI-built websites. Waiting for faceless channels or courses to pay off is slower and less certain. The tools are cheap. A starter stack of an AI assistant, Google AI Pro, ElevenLabs, Suno and Higgsfield Plus costs **about €91 a month**, and **one 300–600 KM local video job pays for it**. Local budgets are small (the average net wage was **1,706 KM in June 2026**), so use Bosnian clients for speed and proof. Then sell the same services to the diaspora of roughly two million people and to EU and US clients at two to five times the price. **Higgsfield is your production studio**. The business owner never touches it; they pay you for the finished video file. Low-ticket digital products only work once you control serious attention: **about 1 million views a month yields roughly \$2,000 net** in a realistic funnel. To get paid, use bank transfer in EUR, Gumroad, Polar or Lemon Squeezy. Stripe merchant accounts are not available in BiH, and PayPal pays out only to Visa cards. After six focused months, a realistic income is **about 5,000 KM a month before tax**. The conservative case is near the average wage and the aggressive case is above 12,000 KM.

*How to read this report. It combines seven research files compiled on 9 October 2026. During the research, vendor pricing pages, Skool, Reddit and YouTube could not be opened directly. So every figure comes from web-search summaries of the cited pages, and many of those pages are third-party or vendor blogs. Treat every price as an October 2026 snapshot, and confirm it on the vendor's own page before you buy or quote a client. Currency: **1 EUR = 1.95583 KM is a fixed peg (background fact)**. For US-dollar prices this report assumes **\$1 ≈ €0.87 ≈ 1.70 KM**; check today's rate. Prices shown in KM are the prices this report suggests, set with BiH wage data in mind. Foreign prices come from the cited benchmarks. Hours per month are planning assumptions, not measured data.*

Service businesses beat passive AI income for a beginner

Business owners don't want "AI". They want more customers, fewer missed calls and ads that sell. Every model below that produces fast, reliable income sells a finished outcome that AI makes cheap to produce. Higgsfield's own numbers show where the money sits. Its CEO says **about 70% of revenue comes from agencies** ([SaaStr](#)). One agency reports spending **3,000–50,000 a month on credits** to produce variations of content for clients' social media ([Inc.](#)). Businesses paying someone to make AI content for them is the market.

Tools cost little next to client prices. A polished 30-second AI ad uses roughly **40–250 of credits** (worked estimate in the Higgsfield section), and direct clients pay **300–800** for one ([Playcut](#)). So the "tool ROI" looks enormous for every service. The real limits are your hours, your taste and your ability to sell. The table therefore also shows estimated earnings per hour.

Business models compared (realistic month 4–6, one model run on its own)

#	Business model	Tool cost/mo	Realistic revenue/mo	Net after tools	Tool ROI	Hours/mo (assumed)	≈ €/hour	Time to first money
1	AI video ads and content packs (Higgsfield + Google Flow)	€130	3 local packs × 500 KM + 1 foreign ad at \$600 = €1,289	€1,159	8.9x	50	€23	1–3 weeks
2	AI UGC ad variant packs for foreign e-commerce	€140	1 batch of 10 ads at \$1,500 = €1,305	€1,165	8.3x	45	€26	3–8 weeks
3	AI receptionist / WhatsApp bots	€105 incl. usage	2 local × 350 KM + 1 diaspora client at €450 = €808 recurring, plus setup fees	€703	6.7x	30	€23	3–6 weeks
4	AI visibility: Google profile, reviews, "GEO-lite"	€45	5 local × 200 KM = €511	€466	10.4x	30	€16	1–2 weeks
5	AI-built websites (Framer, Durable)	€30	1 local site at 1,500 KM + 4 care plans × 60 KM = €890	€860	28.7x	32	€27	2–4 weeks
6	AI social media management	€65	3 local × 400 KM = €614	€549	8.4x	40	€14	2–4 weeks
7	Faceless YouTube (English long-form)	€60	Months 1–6: about €0. Month 12: 100K views × \$6 RPM = €522	–€60 to + €462	negative, then 7.7x	40	€0–€12	6–12+ months
8	Low-ticket digital product	€35	Per 1M views (realistic funnel): €1,790 net of fees	€1,755	50x, <i>only if you already have the views</i>	40	€44	depends on audience
9	Whop clipping	€15	500K approved views × \$1 per 1,000 = €435	€420	28x	60	€7	2–4 weeks
10	AI workshops for SMEs and public bodies	€20	2 half-day workshops × 600 KM = €614	€594	30x	20	€30	4–8 weeks

For context, BiH's average net wage of **1,706 KM (≈ €872) in June 2026** (BHAS) works out to roughly €5 an hour over a 168-hour working month. Every service model above lands at **€14–€30 an hour from the start**, three to six times the local average. The rate climbs as you raise prices and add foreign clients. Faceless channels and clipping pay the worst per hour early on. A low-ticket product pays the best per hour, but only once you already have the attention.

Ranking for a Bosnian beginner.

1. **AI video ads and content packs.** The demo sells itself in a WhatsApp message, margins are high, and Higgsfield's agency-heavy revenue shows that buyers exist.
2. **AI receptionists and messaging bots.** These carry the highest recurring value per client and you can prove the ROI. They need more technical tinkering, and voice quality in Bosnian, Croatian and Serbian is unproven.
3. **AI visibility work.** It is the cheapest and fastest way to get in the door, but local tickets are small.
4. **Websites.** A familiar product that is easy to add on.
5. **Foreign UGC ad packs.** The highest ceiling, but the hardest first sale.

Social media management is commoditized. Faceless brands and products are things to build **in parallel**, not your first income. Choose **one niche and one core offer for 90 days**. Spreading across many offers is the failure pattern practitioners describe most often: buying a template, selling breadth, and having no proof ([ciela.ai summary of Reddit discussions](#)).

A €91 starter stack covers almost every first client

Buy tools in the order that clients pay for them. Free tiers are for practice only. **Higgsfield, Kling, Suno, ElevenLabs and Pika free plans exclude commercial use** ([Creatify on Higgsfield](#); [Lorphic on Kling](#); [Terms.law on Suno](#)). So never deliver client work made on a free plan.

Ranked subscriptions to buy

Rank	Tool and plan	Monthly price	What it does for you	Business model it pays for	Break-even	Buy when
1	Claude Pro or ChatGPT Plus	~\$20 (Claude \$17 billed annually) (nxcodes)	Scripts, shot lists, prompts, outreach, translation, light coding	All	1 visibility client (200 KM) ≈ 6x	Day 1
2	Google AI Pro	\$19.99: 1,000 Flow credits a month, plus 50 free credits a day for every account (SaaS CRM Review)	Veo 3.1 video (Lite 10, Fast 20, Quality 100 credits per clip) and Nano Banana images	Video, UGC, faceless	1 small video job	Day 1 (practise on the free daily credits first)
3	ElevenLabs Starter	\$5–6, commercial licence (Smallest.ai)	Voiceover and voice cloning; v3 supports Bosnian, Croatian and Serbian (ElevenLabs docs)	Video, receptionists, faceless	Any job	Day 1
4	Suno Pro	10(8 annual) (Musicmake)	Commercial music. A reported Sept 2026 cap allows 20 commercial downloads a month (Dynamoi)	Video, faceless	Any job	First video client
5	DaVinci Resolve (free) or CapCut Pro	0, or 19.99 (eeseel)	Editing, captions, on-screen text with č, ć, š, ž, đ	Video, social	n/a	Free on day 1; CapCut Pro once volume grows
6	Higgsfield Plus (Starter to test)	\$49, or \$39 billed annually, for 1,000 credits; Starter \$15 for 200 credits (Higgsfield blog)	UGC Factory, Lipsync, Genjutsu, Soul ID, many models in one workspace	Video ads, UGC, AI characters	One 300 KM ad ≈ 3.6x	Weeks 2–4, once a client is in sight
7	Canva Pro	\$18 (Piktochart)	Static ads, carousels, templates	Social, ads, products	1 social client	First social or ads client
8	Framer Basic	\$10 per site (Goodspeed)	AI-assisted sites with a custom domain	Websites	Billed on to the client	Per website client
9	n8n	Self-hosted free; Cloud Starter about €24 for 2,500 executions (Jetadmin)	Workflow automation	Bots, receptionists, lead follow-up	1 bot client	First automation client
10	Vapi / Retell / Bland	~0.07–0.25 a minute in usage (Stackbinary)	Voice receptionist engine	Receptionists	Usage billed on to the client	When your demo is ready
11	ManyChat Essential / Pro	\$14 / \$29 (Jahanzaib)	Comment-to-DM automation, Instagram and Facebook bots	Product funnels, DM bots	1 bot client	When you run a content funnel
12	Arcads / Creatify / HeyGen	\$110 (10 videos) / \$99 / \$29 (eeseel ; Creatify ; Creatify on HeyGen)	AI-avatar UGC at volume	Foreign UGC packs	1 batch	First foreign UGC client

Rank	Tool and plan	Monthly price	What it does for you	Business model it pays for	Break-even	Buy when
13	Otterly	from \$29 (Layer3Labs)	Tracks brand mentions in ChatGPT, Perplexity and AI Overviews	AI visibility	1 client	At 3 or more visibility clients
14	OpusClip / Submagic	15–29 / 19–39 (Castmagic)	Auto-clipping and captions	Clipping, repurposing	1 client	Only if you clip or repurpose
15	Higgsfield Ultra / Google AI Ultra	129(99 annual) for 3,000 credits / \$99.99 for 10,000 Flow credits, about 100 Veo Quality clips	Volume rendering	Scaled video	~2 local packs	When credits run out two months in a row
16	Lovable Pro / Cursor Pro / Claude Code (included in Claude Pro)	\$25 / \$20 / included (eesel)	Apps and internal tools	Vibecoded apps	1 small build	Only when you sell apps
17	GoHighLevel Unlimited / SaaS Pro	\$297 / \$497. Only the \$497 plan has SaaS mode with markup rebilling (Apexure)	White-label CRM plus AI	Agency at scale	5+ clients	Not before 5 recurring clients

Recommended stacks (monthly, rounded)

Stack	Contents	USD	EUR	KM
Day-1 stack	AI assistant \$20 + Google AI Pro \$19.99 + ElevenLabs Starter \$6 + Suno Pro \$10 + Resolve and Canva free	\$56	€49	95 KM
Starter stack (recommended, under €100)	Day-1 stack + Higgsfield Plus \$49	\$105	€91	179 KM
Starter, annual Higgsfield	Same, with Higgsfield Plus at \$39	\$95	€83	162 KM
Automation starter	AI assistant 20 + <i>n8n</i> Cloud €24 + <i>voiceusagefortesting</i> 15 + Framer \$10 + ManyChat \$14	~\$87	€75	147 KM
Growth stack (at ~€1,500+/mo revenue)	Higgsfield Ultra \$129 + Google AI Ultra \$99.99 + ElevenLabs Creator \$22 + Suno Pro \$10 + CapCut Pro \$20 + Canva Pro \$18 + AI assistant \$20 + Otterly \$29 + <i>n8n</i> Cloud €24	~\$376	€327	639 KM

Keep tools under about 10–15% of revenue. The starter stack is covered **1.7 times by one 300 KM ad** and **2.8 times by one 500 KM monthly pack**. **Don't buy** Sora, which OpenAI shut down in 2026 ([NBC News](#)). Don't buy Udio either: its downloads remain disabled, so it cannot produce client deliverables ([Digital Music News](#)). Skip any accelerator that hides its price behind a call.

Higgsfield is your studio; the business pays for the finished video

■ What Higgsfield is, in plain words

Higgsfield is a website and app with a monthly subscription. In one workspace it gives you many of the best AI video and image models: Veo 3.1, Kling 3.0, Seedance, Wan, plus its own Soul and DoP models ([Higgsfield AI Video](#)). It adds ad-specific tools on top. **UGC Factory** turns a product into a creator-style ad using templates such as Unboxing, Product Review, Try-On and Tutorial ([Higgsfield blog](#)). **Lipsync Studio** makes a face speak a script. **Higgsfield Ads** turns a product URL into a video in about two minutes ([Tadka review](#)). **Soul ID** keeps one character's face consistent across clips. It is a big, real company: it reported a **\$5.4B valuation and \$700M annualized revenue in August 2026** (a company claim, not audited) ([The Next Web](#)).

■ How a business owner actually pays for Higgsfield output

The owner of a Sarajevo café never logs into Higgsfield and doesn't need to know it exists. **They pay you for finished video files** (MP4s in 9:16, 1:1 and 16:9) that they post on Instagram and Facebook or run as ads. The money flows like this:

1. The café pays you, say, **490 KM a month** by bank transfer for six Reels.
2. You pay Higgsfield **\$49 a month** plus about \$20 for the rest of your tools.
3. You keep the difference.

Higgsfield says paid plans don't restrict commercial use and that rights to exported outputs survive cancellation. That comes from a marketing post, so read the Terms ([Higgsfield trust post](#)).

Why wouldn't the owner just do it themselves? Because good AI video takes many attempts and real taste. The famous **\$2,000 Kalshi ad that aired during the NBA Finals took 300–400 generations to get 15 usable clips**, across 2–3 days of work ([CO/AI](#)). The client paid for **concept, taste and speed, not computing power**. That is what you sell too.

■ Genjutsu: recasting real footage instead of inventing it

Genjutsu is real. It is Higgsfield's video-to-video tool, launched around **1 September 2026**, with two modes ([Higgsfield blog](#); [Stork.ai](#)):

- **Motion Transfer** keeps the original motion, camera and timing, and rebuilds the characters, locations and style from your reference images.
- **Object Swap** replaces one item, such as an outfit, a product, a character or a location, and leaves the rest of the shot untouched.

It takes reference clips of **3–30 seconds** and up to **40 reference images**, and outputs up to 1080p. It is not a text-to-video tool and not a face-swap tool. A 15-second clip costs about **40 credits (~2) at 480p, 104 (5.20) at 720p and 144 (~\$7.20) at 1080p**, and re-rolls are charged too ([Kavel.ai](#)). Reviewers report renders stuck on "processing" for days, and hands and heads that blur in fast motion ([AIChief](#)).

For business owners, Genjutsu turns footage they already have into more assets:

- A boutique films one model walking and gets five outfit versions with Object Swap.
- A furniture maker swaps fabric or wood finishes in a single showroom clip.
- A restaurant restyles a phone clip into a seasonal or cinematic look.
- A creator who won't show their face films themselves and comes out as a branded character.

Don't use it to misrepresent a real property or product. A restyled apartment that doesn't match reality is a complaint waiting to happen.

■ Credits run out fast, so price per finished asset

Higgsfield credits are worth about **0.043–0.05 each**. Premium models reportedly cost **40–70 credits per generation**, which is **2–3.50 per attempt** ([Krea](#)). So Plus's 1,000 credits buy only about **14–25 premium generations**, or about **six 1080p Genjutsu clips**. Subscription credits **do not roll over** ([Camclo3d](#)). Plan names and prices changed at least three times in 2026, so quote clients per finished asset and never by plan name.

Budget it like this:

- Draft each shot 4–6 times on cheap or free models: Google Flow's 50 free daily credits, Veo Lite or Fast, Kling, or Seedance Fast.
- Render 1–2 finals on premium models.
- That works out to roughly **55–110 Higgsfield credits (2.50–5.50) per finished clip**.

On that basis a simple 15-second local ad costs about **15–60** in credits. A polished 30-second ad costs **40–250**, depending on the model mix. These are this report's estimates, built from the unit prices above.

■ What to sell with Higgsfield, to whom, at what price

Product	Who buys	Local price (BiH)	Diaspora / EU / US price	Est. tool cost
Cinematic product ad, 15–30 s	Restaurants, shops, brands, startups	300–600 KM	300–800; add +50% if used in paid ads (Playcut calculator)	15–250
Monthly social video pack: 6–10 clips + 6–12 images	Cafés, salons, gyms, hotels	450–900 KM/mo	800–2,500/mo	30–80/mo
UGC-style avatar ads, 5–10 variants	E-commerce, apps, SaaS	150–250 KM each	50–200 each; 1, 200–4,000 per batch of 8–15 (Motionbox)	~5–30 each
Genjutsu recast of client footage	Fashion, furniture, events	150–300 KM per clip	150–400	~\$7 per 15 s at 1080p, plus re-rolls
Brand character or mascot (Soul ID)	Brands that want a consistent face	500–1,000 KM setup + monthly pack	500–1,500 setup	Low
60 s commercial, tourism film or launch trailer	Hotels, tour operators, tourist boards, startups	1,500–3,000 KM	1, 000–2,500+ (Channel.farm)	100–400
Music video for a local artist	Singers, bands	600–2,000 KM	300–1,500	50–300

For reference, US guides put **retail and restaurant AI videos at about 350–500 each, and B2B at 700–1,500** ([Wireflow](#)). Beginner monthly retainers run **1, 500–4,000** ([Fueller](#)). At the bottom of the market, Fiverr gigs start at **40–135** ([Fiverr](#)), so compete on concept and local language, never on price.

■ The production workflow, step by step

Step	What you do	Tools	Time
1. Brief	15-minute call or WhatsApp: goal, offer, audience, platform, deadline. Collect 5–10 product photos and the logo	WhatsApp, form	15–30 min
2. Script and shot list	Write a hook, 6–8 shots for 30 s and a call to action; turn each shot into a prompt	AI assistant	30–60 min

Step	What you do	Tools	Time
3. Keyframes	Generate product-accurate stills; get client approval here , because it saves expensive re-rolls	Nano Banana, Soul	1–2 h
4. Draft motion	Animate the stills on cheap models; pick the best take per shot	Flow free credits, Kling, Seedance Fast	2–4 h
5. Final renders	Re-render the winners at 1080p on premium models	Higgsfield (Veo 3.1, Kling 3.0)	1–2 h
6. Voice and music	Bosnian, Croatian or Serbian voiceover checked by a native ear; licensed music	ElevenLabs, Suno Pro	30–60 min
7. Edit	Cut, captions, on-screen text added in the editor , not generated (diacritics are unreliable), brand colours	CapCut or Resolve	1–3 h
8. Deliver	9:16, 1:1 and 16:9 exports, AI-disclosure note, a short rights summary (tools, plans, music licence), one revision round	Google Drive	30 min

A solo creator working from templates can deliver a 15–30-second ad in **1–3 working days**. Fiverr sellers promise 24–48 hours for simpler UGC formats ([Fluxnote](#)).

■ Higgsfield's own money programs and contests

Higgsfield Earn pays creators who post Higgsfield-made videos on YouTube or Instagram. Earnings are capped at **\$1,000 on day one and \$2,500 per video for its lifetime** ([Higgsfield Earn](#)). Whether BiH residents can join was not confirmed. Higgsfield's own "side-hustle" list recommends three things: brand promos for small businesses that can't afford a studio, a micro-agency serving startups, and running clients' daily posts ([Higgsfield blog](#)). Contests are also a portfolio and prize channel. **Chroma Awards Season 2 is free to enter and open until 31 December 2026, with 175K + incashprizes * * ([AIFilmContests] (<https://aifilmcontests.com/guide/best-ai-film-festivals-for-beginners>)).** **Runway's AIFestival paid * *10,000 plus 500,000 credits** to each track winner in 2026 ([Runway AIF terms](#)). Higgsfield's own \$1M film festival and \$85K Adathon have closed, but they recur.

AI receptionists and automations sell revenue a business already loses

■ Three offers with a number you can prove

The automation offers with the clearest ROI recover money a business is already losing.

Missed-call capture. The widely repeated claim that **62% of small-business calls go unanswered** comes from a 2016 study ([getaira](#)). Newer platform data for home services puts the figure at **27%**, and says **fewer than 3%** of callers sent to voicemail leave a message ([Magicline](#)). Use those figures only as openers, and build the pitch on the prospect's own numbers.

Speed to lead. The MIT/InsideSales study of about 15,000 leads found that calling within **5 minutes instead of 30** made a lead **100x more likely to be reached and 21x more likely to qualify** ([Callsetter](#)). An instant WhatsApp or SMS reply to every Facebook lead form is an easy product to sell.

Database reactivation. AI messages a client's old list and books interested people, often priced **per booked appointment**, so the client takes no risk. One provider reports **4.4% of dormant leads booking on average (peak 8.9%)**, and warns that promises of 15–20% are a red flag ([LeadsNow](#)). You need consent to send marketing messages.

The pitch is a short calculation done with the owner, using their own numbers. Here is an illustration for a clinic:

- 20 missed calls a week × 4.33 weeks × 25% who would have booked × 100 KM per first visit ≈ **2,165 KM lost a month**.
- If an AI receptionist recovers half of that, the clinic gains ~1,080 KM for a 350 KM fee, about **3x its money back**.

A reactivation example: 1,500 old patients × 4.4% = **66 booked visits**. At 20 KM per booking you earn 1,320 KM, and the clinic gets 66 appointments. Every input here is an assumption, so swap in the client's real figures.

■ What delivery costs you

Voice AI runs roughly **0.06–0.25 per minute all-in**. Vapi charges a \$0.05/min hosting fee plus the underlying services, and Bland charges \$0.14/min with no platform fee ([Builts](#)). **600 minutes a month costs about 42–54 on Vapi or Retell** ([DevToolLab](#)). Language-model costs barely register. Anthropic lists its cheapest current model at **\$0.10 per million input tokens and \$0.50 per million output tokens**, and its mid-tier at 2/10 ([Anthropic pricing](#)). By this report's arithmetic, 1,000 chats of about 3,000 input and 500 output tokens cost **under \$1 on the cheapest tier, or about \$11 on the mid-tier**. On WhatsApp, Meta bills per template message by country. Replies inside the customer-initiated 24-hour window were free, and a reported 1 October 2026 change charges service replies only after **1,000 free per number per month** ([EngageLab](#)). n8n Cloud Starter allows 2,500 executions. A workflow that checks for new data every 10 minutes uses **4,320 executions a month** and breaks the cap, so self-host n8n or use triggers instead ([Jetadmin](#)).

■ What to charge: three markets

US guides put small-business automation at **1,500–5,000 setup plus 500–1,500 a month** ([Layer3Labs](#)). Newcomers are told to start at **800–3,500 setup plus 400–900 a month** ([Duet](#)). Managed voice agents list at **2,000–10,000 setup plus 500–2,500 a month**. Off-the-shelf AI receptionist software costs **49–299 a month** (Rosie, Goodcall, Smith.ai from \$150 for 75 calls), and that sets a ceiling on prices for simple setups ([Cloudtalk](#); [Dialzara](#)).

Your premium must come from integration, local-language tuning and the fact that you manage it. Suggested prices:

Offer	BiH local	Diaspora / EU
FAQ chatbot (website, Instagram, WhatsApp)	500–1,000 KM setup + 100–250 KM/mo	€600–€1,500 + €150–€400/mo

Offer	BiH local	Diaspora / EU
AI phone receptionist with booking	800–1,500 KM setup + 250–450 KM/mo	€1,000–€2,000 + €300–€600/mo
Speed-to-lead autoresponder	~600 KM + 150 KM/mo	€900 + €250/mo
Reactivation campaign	15–25 KM per booked appointment	€25–€40 per booked appointment

Your best anchor locally: **the FBiH minimum net wage for 2026 is 1,027 KM (FENA)**. A 350 KM receptionist that never sleeps costs about a third of the cheapest human. Two cautions:

- **Test the voice in Bosnian before you sell it.** ElevenLabs v3 supports the language, but many "Croatian" library voices carry off accents ([json2video](#)). If the voice is weak, lead with WhatsApp chat.
- Generic n8n work on Upwork pays a **median of 23–30 an hour (DevSnipe; Upwatcher)**. The money is in packaging an outcome for a niche, not in selling hours.

■ Websites and vibecoded apps: sell the safe part

AI site builders cost **10–30 a month per site**. Freelance Framer builds sell for **1,800–4,500 for 1–10 pages** in the US ([Brix](#)). Locally, a Sarajevo Canton school paid **1,500 KM for a 15-page CMS site** in 2020 ([KS procurement](#)), and a Croatian agency sells packages at **€265 and €995 (whtop)**. Sell a build fee plus a small monthly "care" fee that covers hosting and edits.

Vibecoded apps pay more, around **2,000–15,000 for prompt-to-app builds (Forcoda)**, but they are risky in a beginner's hands:

- A 2025 flaw in Lovable exposed **170+ production apps** whose databases lacked access rules ([Rafter](#)).
- An audit of 200 vibe-coded apps found **65.77% of 1,186 vulnerabilities rated Critical or High (summary of the arXiv paper)**.
- Replit's agent once **deleted a production database (eWeek)**.

The rule: sell marketing sites, landing pages tied to automations, and internal tools that hold **no customer data, logins or payments**, unless a real engineer reviews the work.

Micro-SaaS can be huge. Photo AI reports **~105Kamonthinrevenue * *,self – published([andrew.ooo] (https://andrew.ooo/posts/pieter-levels-photo-ai-solo-founder/)), and CalAI reached * *30M+ in annual revenue** before MyFitnessPal bought it ([TechCrunch](#)). But both won on distribution, not code. Treat micro-SaaS as a later bet.

■ How deals actually close

The repeatable process has four steps ([ciela.ai](#)):

1. Pick one niche.
2. Build a working demo for the prospect, ideally a **90-second Loom of an AI agent answering a missed call and booking an appointment**.
3. Send personalized outreach that names one problem.
4. Close with a low-risk pilot.

Generic cold email gets **1–3% replies**. Personalized video reportedly **doubles or triples** that, though this is a vendor claim ([Weezly](#)). **Your first two or three clients will almost certainly come from your existing network** (same ciela.ai source). Buyers look for:

- itemized scope
- a support period
- a named contact

- a **30-day exit clause** ([Layer3Labs](#))

Most agencies fail on **sales and proof, not delivery** ([ciela.ai](#)).

AI ads, AI visibility and content win as a bundle, not alone

■ AI UGC ads: sell testing volume, not "better than humans"

AI avatar ads cost about **5–30 per video** to make, against **150–500 for a human UGC creator** (Segwise; LaunchPoint). Freelancers resell them at **50–200 each**, or **1,200–4,000 per batch of 8–15** (Motionbox).

The performance evidence comes from vendors. One dataset claims **3.4x average ROAS for AI ads against 3.1x for human ads**, but humans win by **8–15% on YouTube Shorts** (Lapis). Human creators still tend to win in testimonial-heavy niches (Segwise).

So the honest pitch is "more testable variants per euro, to find winning hooks faster". Sell a **paid test of 10 variants judged on cost per acquisition** against the client's current best ad. Never script an avatar as a real customer: the US FTC rule bans AI-generated fake testimonials, with penalties of up to about **\$51,744 per violation** (Search Engine Land).

■ Creative volume retainers for e-commerce brands

E-commerce creative work is sold monthly. One static-ad retainer delivers **20 concepts × 3 copy variants for 3,200/month** * * ([Dribbble] (<https://dribbble.com/services/122082-Static-Ads-for-DTC-Brands-Monthly>)). A freelance strategist charges *
*2,800 for 10–15 scripts up to 6,600 for 30–40 * * ([Influee] (<https://influee.co/partnership/johnny-kam>)). Al cuts production costs so far that a solo operator in Sarajevo can sell this at *
*150–\$300 per concept and keep most of it. This is the highest-ceiling foreign lane.

■ Meta ads management: bundle it with creatives

Local-business Meta ads management runs **500–1,000 a month for setup and monitoring, 1,500–3,000 for active optimization, or 10–20% of ad spend** (ClicksGeek). Meta made Advantage+ the default and is automating targeting (Social Samosa). Its stated goal is to generate entire ads from a product image and a budget (Influencer Marketing Hub). The value is therefore moving to **creative supply, offers, lead handling and tracking**. Sell "management + 8–12 AI creatives a month" as one retainer, priced locally at about 400–800 KM plus ad spend, and report cost per lead, not clicks. This matters in BiH, a **Facebook-first market**: Facebook takes **87.5% of social page views** (StatCounter) and reaches **2.36M users, 68.6% of the population** (NapoleonCat).

■ Local SEO and "get recommended by ChatGPT"

GEO/AEO means getting a business named in ChatGPT, Gemini, Perplexity and Google AI answers. **AI referrals are still small, about 0.3–1.1% of website traffic** (SE Ranking; Conductor), though growing fast. The strongest case is local discovery. A secondhand summary of BrightLocal's 2026 survey says **45% of US consumers used AI for a local business recommendation, up from 6% a year earlier** (Insites). In a study of 10,000 US local businesses, those AI recommended averaged **133.4 Google reviews against 10.7 for those it ignored**, and technical SEO polish showed almost no relationship. That is a correlation, not proof of cause (Insites).

So "AI visibility" for a local business mostly means:

- a complete Google Business Profile
- a system that generates reviews
- consistent name, address and phone everywhere
- website FAQs
- mentions on local lists and in local media

Google Business Profile work alone sells for **125–500 per location per month plus 300–500 setup** in the US ([Slashpost](#)). US GEO retainers of **3,000–8,000** suit mid-market brands, and anything under \$1,500 is "AEO with a new label" ([Upgrowth](#)).

In Bosnia, sell a **300–500 KM audit plus a 150–300 KM monthly retainer**. Avoid mass AI blog pages for clients. Since **15 May 2026**, Google's spam policy explicitly covers mass content made to manipulate **AI Overviews and AI Mode** ([PPC Land](#)).

■ AI content and social media: easiest to sell, cheapest to buy

US freelancers charge **300–1,500 a month** for small-business social media ([eClincher](#)). A regional Croatian guide puts packages at **€300 at the low end and €700–€1,500 mid-tier** ([Kontentino](#)). But a remote social media manager in BiH earns a median of only about **\$13,000 a year** ([Plane](#)). Plain posting is commoditized, so differentiate with short-form video and lead-tied reporting. Sell it as an add-on to a video pack rather than as your headline offer.

■ Clipping: real, but small

On **Whop Content Rewards**, brands pay per 1,000 verified views of clips you post on your own accounts, commonly **0.50–1.50 per 1,000** ([ClipAffiliates](#)). Whop pays out in 200+ countries ([Whop docs](#)), and BiH is not on the sanctioned list quoted in Whop's docs ([Whop docs](#)). Still, \$500 a month needs about 500K approved views. Many campaigns want US or Tier-1 viewers, not a Balkan audience. Clipping is a way to build skill, not a business.

Faceless brands pay slowly, and only YouTube pays BiH residents directly

What still works, and what YouTube is deleting

AI-only channels can be huge. Kapwing found **278 AI-only channels among ~15,000 top trending channels**, with **63 billion views and ~\$117M a year in estimated ad revenue**. The top channels, built on a monkey character, a French bulldog and "wisdom" Shorts, earn an **estimated \$4M a year each** (Kapwing). That is about 2% of the channels studied, and the revenue is modelled, not paid out. YouTube is pushing back:

- It renamed its policy to **"inauthentic content" on 15 July 2025**. It is not a ban on AI, but videos must add original value (Social Samosa).
- Its CEO named **"AI slop" a 2026 priority** (Digital Music News).
- It **terminated the AI fake-trailer channels Screen Culture and KH Studio** in December 2025 (TheWrap).
- It removed 16 large AI-slop channels with an estimated combined **\$9.8M a year in earnings** (Net Influencer).
- Since May 2026 it **auto-applies AI labels** to undisclosed realistic AI video (TechWyse).

Where the money goes depends on niche and audience location:

- **Education** has the highest median RPM at **\$10.22**. RPM is what you earn per 1,000 views.
- **Shorts pay only 0.02–1.48 per 1,000 views** (AIR Media-Tech; AIR Shorts).
- Audiences in emerging markets earn **60–80% less** (OutlierKit).

A Bosnian-language channel therefore earns little from ads. English long-form aimed at Tier-1 audiences earns far more.

Monetization rules for a creator living in BiH

Program	Open to a BiH resident?	What to know
YouTube Partner Program	Yes , BiH is on the availability list (seen via a cached copy; verify the live page) (YouTube Help)	Channel memberships are priced in BAM (YouTube Help). Check current ad thresholds in YouTube Studio
TikTok Creator Rewards	No . Only the US, UK, Germany, France, Japan, South Korea and Brazil (ShortSync)	Using a VPN to get around eligibility risks a ban (Comparitech)
TikTok LIVE gifts	Possibly	A BiH source says TikTok keeps roughly 50% of gifts, and that sponsorships are TikTokers' main income (Biznis.ba)
Facebook Content Monetization	Not confirmed : invite-only, and BiH is missing from published lists (Insighthive)	Treat it as unavailable unless an invite appears
Instagram bonuses and subscriptions	Not researched	Treat Instagram as a traffic source
Whop clipping, Gumroad, Polar	Likely or yes (see the payments section)	Off-platform income is your main income
Sponsors, affiliate deals, your own products and services	Yes	Where Balkan creators actually earn

Don't buy "foreign-registered" TikTok or Facebook accounts, and don't use a VPN to get around eligibility rules. Both break platform terms and put the whole account at risk.

■ Faceless brands that fit the Balkans

The best formats cross borders inside the Bosnian, Croatian, Serbian and Montenegrin language area and reach the diaspora. The BiH ministry estimates **about 1.67M BiH-born people living in 51 countries, about 2M with descendants: roughly 160K in Germany, 150K in Austria and 132K in the USA**. These are dated estimates from around 2017 ([RSE](#)).

Brand concept	Language and platform	What it posts	How it earns	Risk
"AI na našem jeziku" (AI in our language)	BCS; YouTube, TikTok, Instagram	Screen-recorded AI tutorials for small businesses and employees, no face	Low-ticket prompt packs, workshops, service leads	Low. Strongest fit: 70% of BiH civil servants use AI but ~95% have had no training (UNDP)
Yugo-nostalgia	BCS and English; Instagram, TikTok	AI-recreated 1980s objects, ads and street scenes	Merchandise, sponsors. The "Made in Yugoslavia" Instagram account grew into a merch brand (Ara)	Image rights on archive photos
Grandma's Balkan kitchen	BCS and English; Reels, YouTube	Faceless hands-only recipes with an AI voice	Cookbook (low-ticket), food-brand sponsors, affiliate links	Low
Football hype for the national team	BCS and English; TikTok, Shorts	AI-illustrated stories, stats and history. BiH qualified for the 2026 World Cup (beIN Sports)	Sponsors, merchandise	Never use broadcast match footage
Balkan history in English	English; long-form YouTube	Documentaries on Ottoman, Austro-Hungarian and Yugoslav history	AdSense at history RPMs of about 5–12 (AIR Media-Tech), plus sponsors	Handle war topics with care
Bosnia for the diaspora	German and English; YouTube, Facebook	Homecoming tips, prices, real estate, travel	Referral fees from local real estate, dental and travel businesses	Low
Visit Bosnia cinematic shorts	German, Turkish, English	AI-enhanced tourism shorts	Tourism affiliate deals, tourist-board contracts	Low
Everyday Balkan humour	BCS	Family, coffee and "mama" comedy	Local brand sponsored posts	Avoid ethnic banter. The main Balkan meme subreddit was banned in 2020 for promoting hate (meme.com)

■ Creating content without showing your face

The best no-camera workflow keeps a human performance and swaps the visuals:

1. Record yourself on a phone acting or talking.
2. Run the clip through **Genjutsu Motion Transfer** with reference images of a consistent AI character built in **Soul ID**. Soul ID trains on at least 20 photos in 3–5 minutes ([Higgsfield Soul ID](#)).
3. Keep your own voice, or use a synthetic one.

Higgsfield's academy describes a full pipeline: portraits, then Soul ID, then scenes, then animation in Kling, then Lipsync Studio ([Higgsfield Academy](#)). Because the human performance survives, the result also passes YouTube's "original value" test better than fully synthetic clips. Simpler options:

- voiceover over B-roll
- screen recordings
- AI avatars such as HeyGen (Creator plan \$29)
- animated characters

■ AI influencers: real money, but concentrated and risky

No AI influencer's revenue has been independently audited. The agency behind Aitana López claimed **€3,000–€10,000 a month** in 2023 ([Business Insider NL](#)). Fanvue said AI model Emily Pellegrini earned **\$23,000 in January 2024**, and AI creators made up about **15% of Fanvue's revenue** ([Fortune](#)). Sacra estimated Fanvue's annual run-rate at about \$100M at the end of 2025 ([Sacra](#)). Solo AI-influencer money therefore sits mostly in adult-adjacent subscriptions. That brings heavy fan-chat work, payment risk and reputational risk. Brand deals for unknown AI personas are a thin market. **Under EU AI Act Article 50, from 2 August 2026 deepfakes and realistic AI content must be disclosed** ([European Commission](#)). Always label an AI persona as AI, and never imitate a real person's face, voice or name. The best use of an AI persona for you is as a **traffic engine for your services and products**.

■ Faceless math

- English long-form at **5–10 RPM** needs about **100K–200K views a month for \$1,000**.
- Shorts at 0.05–0.30 RPM need several million views for the same amount.

Those figures are this report's estimate, built from the RPM data above. Treat a faceless channel as a **6–12+ month build** that stacks ads, affiliate deals, products and sponsors. It should not be your rent money in month one. Viral "Bigfoot AI vlog" earnings claims ("\$3,000 in 8 days") are Gumroad sales copy, not evidence ([Gumroad listing](#)).

A low-ticket product needs roughly a million views to matter

What to sell

Low-ticket means **7–49**. Fixed fees make anything under about \$9 inefficient: Gumroad takes **10% + \$0.50 per sale** ([Gumroad pricing](#)), which is 20% of a *5product.Theoneindependentlyverifiedtemplatesuccess,Easlo's* * *239,000 in a year** from Notion and budgeting templates, was built on a big organic audience. It is also old, from around 2022 ([Business Insider via Yahoo](#)). No verified 2025–2026 revenue was found for AI prompt packs or workflow templates. Sell to a **niche of buyers** (restaurant owners, e-commerce marketers) rather than to the "make money online" crowd, which brings more refunds and disputes. Good matches for this playbook:

Product	Market	Front-end	Order bump	Upsell	Next step up
"100 AI video-ad prompts + shot lists for e-commerce"	English	\$17	300-hook bank, \$9	Video course or 3 custom scripts, \$47	Done-for-you ad pack, \$500+
"AI za male biznise: 50 gotovih promptova" (AI for small businesses: 50 ready-made prompts)	BCS	19 KM	Canva post templates, 9 KM	Video course "AI asistent za vaš biznis" (an AI assistant for your business), 49 KM	Workshop or setup, 300–1,000 KM
Grandma's Balkan cookbook (from the faceless food brand)	BCS / English	€9–€15	Seasonal mini-book	Printed edition	Sponsors
n8n receptionist template + setup guide	English	\$29	Prompt library	Setup call, \$149	Managed service

The attention engine

The machine works in five steps:

1. Post **AI-produced short-form content every day**.
2. End each post with a comment keyword ("comment PROMPTS").
3. **ManyChat** DMs the link automatically ([ManyChat guide](#)). Instagram's rules limit automated follow-ups to the **24-hour messaging window** ([ManyChat rules](#)).
4. The buyer checks out with an order bump, then sees a one-click upsell.
5. You build an email list and later make a service offer.

You can also **rent attention** with a Whop clipping campaign, paying clippers about **\$1 per 1,000 verified views**, so roughly \$1,000 buys a million views ([OpenClip guide](#)). DM click-through figures of 18–35% come from vendors and are unverified ([Communipass](#)).

Full funnel math: views, clicks, sales, bump, upsell

The standard break-even formula is: **front-end price + (bump price × bump take rate) + (upsell price × upsell take rate)**. The classic example, $\$27 + \$17 \times 35\% + 67 \times 1240.99$ average order value**, which is also the most you can pay to acquire a buyer ([LTO Ads](#)). Vendors quote bump take rates of **20–40%** ([CartFlows](#)). Treat that as optimistic: SamCart's own worked example shows about a **9.7% lift in order value**, not the "30%+" in its headline ([SamCart](#)). The best independent landing-page benchmark, a **6.6% median conversion**, includes free sign-ups, so paid checkouts from cold social traffic will convert lower ([Search Engine Land on Unbounce](#)). The rates below are planning assumptions. Replace them with your own data after the first 1,000 visitors.

Funnel step	Conservative	Realistic	Aggressive
Monthly views	1,000,000	1,000,000	3,000,000
Click to link	0.2% → 2,000 visitors	0.5% → 5,000	0.8% → 24,000
Buy front-end at \$17	1% → 20 sales = \$340	2% → 100 sales = \$1,700	3% → 720 sales = \$12,240
Order bump at \$9	20% take → \$36	30% → \$270	35% → \$2,268
Upsell at \$47	5% take → \$47	8% → \$376	12% → \$4,042
Gross revenue	\$423	\$2,346	\$18,550
Gumroad fees (10% + \$0.50 per transaction)	-\$53	-\$289	-\$2,258
Net revenue	\$370 (€322 / 630 KM)	\$2,057 (€1,790 / 3,501 KM)	\$16,292 (€14,174 / 27,722 KM)
Gross per buyer	\$21.15	\$23.46	\$25.76
If the views were bought through clipping at ~\$1 per 1,000	-\$1,000 → loss of \$630	-\$1,000 → profit of \$1,057	-\$3,000 → profit of \$13,292

Four lessons follow from the table:

- 1. Attention is the product.** A million views at weak conversion doesn't even pay for the clipping.
- In the realistic case, each buyer brings about **\$20.57 net**, so paid ads only work below roughly \$20 per buyer.
- 3. The back end matters most.** If just 2 of the 100 realistic buyers later book a €500 done-for-you service, that adds €1,000, which is more than half again what the product itself netted (€1,790). (The 2% rate is an assumption; no ascension data was found.)
- Third-party guides say Gumroad's processing fees may come on top, for an effective **12.9% + \$0.80**, and that **fees are not refunded** on refunds. Check this in your dashboard ([CheckoutPage](#)).

Fifty-three ideas, ranked by market fit

The KM prices are this report's suggested local prices. Foreign ranges come from the benchmarks cited in the sections above. Markets: **BiH** = local businesses, **Dia** = diaspora-owned or diaspora-facing, **EU/US** = foreign clients or audiences.

#	Idea	How it makes money	Rough price / revenue	Best market
1	Cinematic AI product ad, 15–30 s	Fee per video	300–600 KM; 300–800	BiH, Dia, EU/US
2	Monthly Reels and short-video pack	Retainer	450–900 KM/mo; 800–2,500/mo	BiH, Dia, EU/US
3	UGC-style avatar ad variant packs	Fee per batch	1,200–4,000 per 8–15 ads	EU/US
4	Restaurant and café food clips with a Bosnian voiceover	Fee per pack	300–500 KM	BiH
5	Tourism films in German, Turkish and English	Project fee	1,000–2,500 KM; €1,500+	BiH, EU/US
6	Real-estate listing videos, phone footage plus AI polish	Fee per listing	150–400 KM	BiH, Dia
7	Genjutsu recast of a client's footage (product or outfit swap)	Fee per clip	150–300 KM; 150–400	BiH, EU/US
8	Brand mascot or character (Soul ID) plus monthly content	Setup + retainer	500–1,000 KM setup	BiH, EU/US
9	AI music videos for local artists	Project fee	600–2,000 KM	BiH, Dia
10	Event teasers and aftermovies (festivals, conferences)	Project fee	300–1,500 KM	BiH
11	AI "love story" and invitation videos for diaspora weddings	Fee per video	200–600 KM	Dia
12	Launch trailers and commercials for startups and apps	Project fee	1,000–2,500	EU/US
13	AI product photography for webshops (10–20 images)	Fee per pack	150–400 KM; 200–600	BiH, EU/US
14	Dubbing foreign brands' ads into BCS	Fee per video	€100–€300	EU/US (Balkan entry)
15	White-label AI video for Western marketing agencies	Fee per asset	150–400	EU/US
16	AI film contests (Chroma, Runway, Higgsfield)	Prizes, credits	Chroma pool \$175K+	Global
17	Higgsfield Earn campaigns	Pay per view	Up to \$2,500 per video (cap)	Global
18	AI phone receptionist for clinics, dentists and salons	Setup + retainer	800–1,500 KM + 250–450 KM/mo; €1,000–€2,000 + €300–€600/mo	BiH, Dia, EU/US
19	WhatsApp, Instagram and Facebook FAQ and booking bot	Setup + retainer	500–1,000 KM + 100–250 KM/mo	BiH, Dia
20	Speed-to-lead autoresponder for lead forms	Setup + retainer	~600 KM + 150 KM/mo; €900 + €250/mo	BiH, EU/US

#	Idea	How it makes money	Rough price / revenue	Best market
21	Database reactivation, paid per booked appointment	Commission	15–25 KM; €25–€40 per booking	BiH, EU/US
22	Automated review requests after each visit	Retainer	100–200 KM/mo	BiH, Dia
23	AI-built websites for local businesses	Build + care fee	1,000–2,500 KM + 50–100 KM/mo	BiH
24	Landing pages and booking funnels for foreign small businesses	Project fee	500–1,800	EU/US
25	"Replace expensive software" internal tools (no customer data)	Project fee	1,500–5,000 KM; 2,000–15,000	BiH, EU/US
26	n8n and Make workflow gigs on Upwork	Hourly or project	Median 23–30/h	EU/US
27	Document and invoice processing for accountants and lawyers	Setup + retainer	~1,000 KM + 200 KM/mo	BiH
28	Vertical micro-SaaS (tourism, clinics)	Subscriptions	Photo AI's ~\$105K/mo is an outlier	EU/US
29	Vibe-code "rescue" and security hardening (engineers only)	Project fee	1,500–5,000	EU/US
30	Citizen FAQ chatbots for municipalities and tourist boards	Procurement contract	Direct agreements of the ~1,500 KM type	BiH
31	AI visibility audit and fix (GEO-lite)	Audit + retainer	300–500 KM + 150–300 KM/mo; 125–500/location/mo	BiH, Dia, EU/US
32	Google Business Profile management	Retainer	100–250 KM/mo	BiH
33	Meta ads management bundled with AI creatives	Retainer	400–800 KM/mo; 500–3,000/mo	BiH, EU/US
34	Static ad volume packs for e-commerce brands	Retainer	1,500–3,200/mo	EU/US
35	AI social media management	Retainer	300–700 KM/mo; 300–1,500/mo	BiH, Dia, EU/US
36	Multilingual content for tourism businesses (DE, TR, EN)	Retainer	400–800 KM/mo	BiH
37	Podcast and long-video repurposing into clips	Retainer	300–1,000/mo	EU/US
38	Clipping on Whop Content Rewards	Pay per 1,000 views	0.50–1.50 per 1,000 views	Global
39	Running clipping campaigns for brands	Fee or margin	From \$500 per campaign	EU/US
40	AI workshops for SMEs and public bodies	Fee per workshop	500–1,500 KM per half day	BiH
41	Done-with-you AI assistant setups for professionals	One-off fee	300–800 KM	BiH
42	AI professional headshots from the client's own photos	Fee per set	50–150 KM	BiH, Dia
43	English long-form faceless channel (history, explainers)	AdSense + sponsors	5–12 RPM; ~\$1,000/mo at 100K–200K views	EU/US audience
44	Yugo-nostalgia page that leads to merchandise	Merch, sponsors	"Made in Yugoslavia" model	BiH, Dia
45	Grandma's Balkan kitchen faceless brand	Cookbook, sponsors	€9–€15 product	BiH, Dia

#	Idea	How it makes money	Rough price / revenue	Best market
46	National-team football hype page for the 2026 World Cup	Sponsors, merch	Seasonal spikes	BiH, Dia
47	"AI na našem jeziku" education brand	Products, then workshops and services	19–49 KM products	BiH, Dia
48	Diaspora "home" channel (travel, real estate, homecoming)	Referral fees, affiliate deals	Per lead	Dia
49	SFW AI persona for one niche	Sponsors, affiliate deals	Claims of €3K–€10K/mo are outliers	EU/US
50	English low-ticket prompt or template pack with bump and upsell	Sales	~\$2,057 net per 1M views (realistic)	EU/US
51	BCS templates for Balkan small businesses (Canva, prompts)	Sales	10–30 KM each	BiH
52	Paid Skool or Whop community (only after you have results)	Subscriptions	Median Skool community ≈ \$1,217/mo, upper bound (Profitable.app)	Dia, EU/US
53	Children's songs and stories in BCS	AdSense	Very low RPM; kids' content earns ~30x less than education	BiH, Dia (weak)

Bosnia's late start is an edge if you price for two markets

Why being early pays here

Exact BiH figures for company AI use could not be retrieved, but the region trails badly. **19.95% of EU enterprises used AI in 2025**, while candidate country **Türkiye was at 7.41%** (Eurostat; Cyprus Mail). Individuals already use AI informally: **70% of BiH civil servants use AI tools, yet ~95% have had no training** (UNDP). The visible local AI players, such as 387labs and the SarAI Center, focus on enterprise and development work (UNSA). No dominant AI marketing agency for small businesses turned up, though the search was limited.

So in most Bosnian towns, the **first person who walks into a café with a stunning 10-second video of its own food** has no competition. A 2024 market report also says **TikTok advertising was not available locally** (we_know). That keeps the game on Facebook and Instagram, where you can demonstrate results easily.

The catch is size. BiH has **9.7 SMEs per 1,000 inhabitants against 50.4 in the EU** (OECD), and budgets are small. So the winning sequence is **local proof → diaspora → foreign**.

Local industries to target first

Industry	Why now	First offer
Tourism (hotels, tours, restaurants in Sarajevo, Mostar, Neum)	Foreigners make up 70.8% of overnights , but Jan–Nov 2025 arrivals were flat (+0.1%) and July 2025 overnights fell 8.6% (BHAS; BHAS July). The top source markets are Croatia 13.5%, Serbia 10.8%, Türkiye 9.9%	Multilingual promo films and ads; Turkish versions stand out
Dental clinics, medical and beauty	Appointment-driven, high value per booking, missed calls cost money	AI receptionist plus AI visibility audit
Restaurants and cafés	Instagram-driven, visual products	Monthly Reels pack
Real estate	Diaspora buyers abroad need remote viewing	Listing videos, WhatsApp lead bot
Weddings and events	Summer diaspora homecoming season	Teasers, invitation videos
Furniture, wood and other exporters	Foreign buyers judge them online	Product videos, Genjutsu finish swaps, catalogue sites
Auto repair and dealers, trades	Phone-heavy businesses	Missed-call text-back, review automation
Public bodies, schools, tourist boards	They already outsource social media and websites through simple direct agreements (OK BiH call)	AI workshops, content retainers, FAQ bots

Two price lists: local and foreign

Service	BiH local (KM)	≈ EUR	Diaspora / DACH (suggested)	US/EU benchmark (cited)
15–30 s AI product ad	300–600	€155–€305	€300–€600	300–800 per 30 s
Monthly short-video pack	450–900/mo	€230–€460	€600–€1,500	800–2,500 (SMB), beginner retainers 1,500–4,000
AI UGC ad	150–250 each	€75–€130	€100–€200	50–200 each

Service	BiH local (KM)	≈ EUR	Diaspora / DACH (suggested)	US/EU benchmark (cited)
AI receptionist	800–1,500 setup + 250–450/mo	€410–€770 + €130–€230	€1,000–€2,000 + €300–€600	2,000–10,000 + 500–2,500 managed; software 49–299
FAQ chatbot	500–1,000 + 100–250/mo	€255–€510 + €50–€130	€600–€1,500 + €150–€400	1,000–5,000 + 200–1,000
AI visibility / Google profile	300–500 audit + 150–300/mo	€155–€255 + €75–€155	€300 + €150–€300/mo	125–500 per location per month
Website	1,000–2,500	€510–€1,280	€1,000–€2,500	1,800–4,500 (Framer, 1–10 pages); regional €265–€995
Social media management	300–700/mo	€155–€360	€400–€900	300–1,500 (US freelancers); €300–€1,500 regional
Meta ads management	400–800/mo	€205–€410	€500–€1,000	500–1,000 basic, 1,500–3,000 active
Half-day AI workshop	500–1,500	€255–€770	€800–€1,500	n/a

Local prices sit at roughly a third to a half of the US benchmarks, in line with the wage gap. Vetted marketplaces pay **senior BiH developers a median of \$44 an hour** ([Lemon.io](#)), which shows foreign buyers already pay Bosnian talent several times local rates. You share the CET time zone with all of the EU, and as a native speaker you can check AI scripts and voices in Bosnian, Croatian and Serbian. You also know the ijekavian and ekavian variants, which matters when targeting Serbia versus Bosnia. Foreign AI agencies can't easily copy any of that.

■ The diaspora bridge and public money

The diaspora is the ideal second market. It has DACH and US incomes, shares your language, and has emotional ties to BiH businesses. Diaspora-owned clinics, restaurants, car dealers and construction firms in Germany and Austria will trust a Bosnian freelancer faster than a stranger.

On grants: the **EBRD/EU "Go Digital in the Western Balkans" programme** offers **up to €350M in loans plus €27.6M in EU grants and support**, with a **10% grant incentive** on each loan. It builds on a BiH pilot that supported about 200 companies ([EEAS](#)). It doesn't pay you directly, but firms that are digitizing are warm prospects. Watch also for expert calls such as the EU4 Digital Transformation call posted on 5 August 2026 ([MojPosao.ba](#)).

Getting paid from BiH takes two rails and a registered business

■ Payment platforms that work

Rail	Use it for	BiH status	Fees	Watch out
Bank transfer (KM locally; EUR by SWIFT/IBAN abroad)	All client services	Works	Bank fees	Your default for B2B invoices
Gumroad	Digital products	BAM bank payout listed , minimum 50 BAM (Gumroad Help); merchant of record since 1 Jan 2025 (Gumroad)	10% + \$0.50 (30% via Discover)	One guide reports a \$100 minimum payout since March 2026; fees are not refunded on refunds
Polar	Products, subscriptions	BiH on the payout list via Stripe Connect Express (Polar); merchant of record	4% + 40¢, +1.5% international cards, +0.5% subscriptions (Polar fees)	Bank account must be in BiH, in local currency
Lemon Squeezy	Products, software	BiH on the bank-payout list ; BAM supported (docs)	~5% + 50¢ (Dodo)	Moving to Stripe Managed Payments; docs may be old
Paddle	Software, SaaS	BiH in its supported-countries table (Paddle)	~5% + \$0.50	Approval-based
Whop	Communities, clipping	BiH not on the sanctioned list; per-country payout support unconfirmed (Whop)	2.7% + \$0.30, +1.5% international; 2% optional tax handling (Whop fees)	Whop's own pages conflict on whether it is merchant of record
PayPal	Backup	Can receive; withdrawals only to BiH-issued Visa cards (UniCredit BL)	~1% withdrawal fee + ~4% currency margin (Wise HR)	Some banks have blocked payouts in the past
Stripe	n/a	No standard merchant account ; BiH is "only available for cross-border payouts accounts" (Stripe docs)	n/a	Get advice before using "foreign company" shortcuts
Etsy	n/a	BiH not eligible for Etsy Payments (Etsy)	n/a	You may not be able to open a shop
Payoneer / Wise	Possibly	Payoneer appears on Dribbble's BiH payout list (Dribbble); the Wise card is reportedly unavailable to BiH residents (Exiap)	Varies	Confirm before you rely on either
Monri	Card payments from local customers	Croatian processor used in the region (Dnevnik.hr)	BiH card commissions are often 1.5–3.5% plus monthly fees (Paragraf)	Only needed for a local web shop

Run **at least two working rails**, such as bank transfer plus Gumroad or Polar, so that one frozen account doesn't stop your income. A merchant of record such as Gumroad, Polar or Lemon Squeezy is the legal seller and handles EU VAT on consumer sales, which matters because BiH is outside the EU.

■ Tax and legal basics

Where you register changes your take-home pay a lot.

Republika Srpska. A "mali preduzetnik" (small entrepreneur) with **under 100,000 KM in revenue and at most 3 employees pays 2% of collected revenue** as income tax. The minimum is 600 KM a year under 50,000 KM of revenue and 1,200 KM between 50,000 and 100,000 KM ([Novigrad guide](#)). Contributions come on top and were not verified.

Federation of BiH. Income from foreign clients is self-assessed at **10% income tax plus 4% health contributions**, filed on form AMS-1035 **within five days of receipt** ([Paragraf](#)). Registered entrepreneurs instead pay contributions on fixed monthly bases. In 2023 these were **934 KM for flat-rate crafts and 1,869 KM for book-keeping free professions**, and they rise every year ([Unija](#)).

VAT. Registration becomes mandatory at **100,000 KM** in turnover. Foreign providers of digital services to BiH consumers must charge **17% VAT** ([VATCalc](#)).

Banks give account turnover data to the tax authorities on request ([RSE](#)), so undeclared income is visible.

An illustration using the realistic scenario below: 5,375 KM a month is 64,500 KM a year.

- **RS small entrepreneur:** 2% is about **1,290 KM a year**.
- **FBiH 10% + 4% route on gross income:** up to roughly **9,000 KM a year**, before any deductions or contributions that apply to your status.

That is a simplified comparison. **Get a local accountant before your second paying client.**

■ Compliance checklist

Rule	When it hits you	What to do
EU AI Act Article 50 (from 2 Aug 2026; fines up to €15M or 3% of turnover) (Cooley)	Voice or chat agents for EU clients; realistic AI ads shown to EU audiences (Mondaq)	The agent says it is an AI in its first sentence; visible "AI-generated" labels on realistic synthetic ads
FTC fake-testimonial rule	US-facing ads	Avatars act as presenters, never as invented customers
Platform AI labels	Meta "AI info" (ContentGrip); TikTok requires labels on realistic AI (CommonThread); Google Ads AI label setting since 9 July 2026 (PPC Land)	Switch labels on; keep C2PA metadata intact
GDPR	Processing EU residents' data, such as call recordings	Lawful basis for recording, a data processing agreement, retention limits (Relinns)
BiH data-protection law	Local bots and recordings	Not researched; ask a lawyer
Commercial rights	Every deliverable	Paid plans only; Suno download caps; no Udio; no real-person likeness without consent

The sales kit: messages, free samples, tiers and objections

■ Outreach templates in English

A. Foreign e-commerce brand (email or LinkedIn)

Subject: 3 new hooks for your [product] ads (already made)

Hi [Name], I looked at [Brand]'s current ads. The [product] demo is strong, but most of them open with the same first three seconds, which limits how many winners you find.

I made three 15-second variants with new hooks: [link]. They're yours to test, no strings attached.

I produce batches of 10 AI ad variants (UGC-style and product shots) in 5 working days for \$[X]. We judge them on CPA against your current best ad. AI is disclosed where platforms require it, and there are no fake customer testimonials.

Worth a 15-minute call this week? [Name] · [portfolio link] · Sarajevo, CET

B. Diaspora-owned practice in Germany or Austria (email)

Subject: No more missed patient calls, in German, English and Bosnian

Hi [Name], I called [Practice] on [day] at [time] and got voicemail, which is normal after hours.

I build AI phone and WhatsApp assistants that answer 24/7, explain prices and opening hours, and book appointments straight into your calendar. They introduce themselves as AI, as the EU AI Act requires, and hand over to your team when needed.

Here's a 90-second recording of a demo set up with your practice's name: [Loom link].

I work from Bosnia, in your time zone, which keeps my pricing well below local agencies: €[X] setup and € [Y]/month, with a 14-day pilot you can cancel anytime. Shall I set up the pilot? [Name]

C. 90-second Loom script

1. **0–10 s:** "Hi [Name], I made this specifically for [business]."
2. **10–40 s:** Show the problem: a missed-call log, a ChatGPT answer that leaves them out, or their repeated ad hook.
3. **40–75 s:** Show the fix: the sample video playing, the demo call audio, or a mock-up.
4. **75–90 s:** "It's [price], with a [free first video / 14-day pilot]. Reply 'yes' and I'll send the next steps."

D. Follow-up (three days later)

Hi [Name], just checking the video came through. I'm happy to make one more version featuring [specific dish/product]. If now isn't the right time, no problem at all.

■ Outreach templates in Bosnian/Croatian/Serbian

1. Instagram or Facebook DM to a restaurant (video pack)

Pozdrav [Ime]! Pratim [Naziv] na Instagramu i vaš [doručak / čevapi / tufahije] izgleda odlično. Napravio sam vam besplatan kratki video od 10 sekundi, samo od fotografija s vašeg profila: [link]. Slobodno ga objavite. Ako vam se sviđa, mogu vam svaki mjesec praviti 6–8 ovakvih videa za Reels i Facebook, sa glasom na našem jeziku i titlovima, za 490 KM mjesečno. Bez dugoročnog ugovora – otkazujete kad želite. Imate li 10 minuta ove sedmice da vam pokažem još par primjera? [Ime], [telefon]

2. Email or DM to a dental practice (AI visibility)

Poštovani dr. [Prezime], jučer sam ChatGPT-u postavio pitanje: „Koji je najbolji stomatolog u [grad]?” Preporučio je [Konkurent 1] i [Konkurent 2], a vaša ordinacija se nije pojavila (snimak ekrana je u prilogu). Najčešći razlozi su broj Google recenzija i nepotpun Google profil: oni imaju [X] recenzija, a vi [Y]. To se može popraviti za nekoliko sedmica. Nudim besplatnu analizu od 15 minuta u kojoj vam pokažem šta AI alati „vide” o vama i šta tačno treba promijeniti. Da li vam odgovara utorak ili četvrtak? Srdačan pozdrav, [Ime]

3. WhatsApp after a missed call (AI receptionist)

Dobar dan, [Ime]. Jučer u 18:30 zvao sam vašu ordinaciju i niko se nije javio – to se dešava svima poslije radnog vremena. Napravio sam AI recepcionera koji se javlja 0–24 na našem jeziku, odgovara na pitanja o cijenama i terminima i zakazuje pacijente direktno u vaš kalendar. Na početku razgovora jasno kaže da je AI asistent. Mogu li vam poslati snimak od 60 sekundi kako zvuči s imenom vaše ordinacije? Prve dvije sedmice su besplatne, bez obaveze.

4. Walk-in script (say it out loud, phone in hand)

Dobar dan, ja sam [Ime]. Pravim reklamne videe uz pomoć umjetne inteligencije za lokale u [grad]. Evo, ovo sam napravio za vas od slika s vašeg Instagrama. Mogu vam ga poslati besplatno. Paket od šest ovakvih videa mjesečno je 490 KM. S kim bih mogao razgovarati o tome?

■ The free-sample strategy

Free samples are your best sales tool if you set limits:

- **One free asset per prospect, capped at 30–60 minutes and a few dollars of credits.** Build it from their own public photos so it feels personal.
- Keep any audit to **one or two findings**, or it turns into free consulting ([ClearAudit](#)).
- Make free samples only for your top 20% of prospects. Everyone else gets your portfolio.
- Offer pilots of 14 days, not 60.
- Track the funnel every week: messages sent, replies, calls, closes.

If you have no case studies yet, say plainly that the demo is a prototype ([ciela.ai](#)).

■ Offer tiers with pricing

Local video (KM)	What's included	Price
Start	1 cinematic 15–20 s ad, 9:16 + 1:1, Bosnian voice or text, 1 revision	290 KM one-off
Rast (Growth)	6 short videos + 8 images per month, captions, ready to post	590 KM/month
Pro	12 videos + 2 UGC-style ads + boost setup + monthly report	1,190 KM/month

Foreign ads (USD)	What's included	Price
Test	5 ad variants, 2 hooks each, 9:16	\$490
Scale	15 variants a month + hook bank + statics	\$1,490/month
Partner	30 variants + statics + monthly creative strategy call	\$2,990/month

Automation	BiH local	Diaspora / EU
Chat: FAQ and booking bot	600 KM + 150 KM/mo	€990 + €290/mo
Receptionist: phone AI + booking + confirmations	1,200 KM + 350 KM/mo	€1,900 + €490/mo
Growth: receptionist + review requests + reactivation	2,000 KM + 600 KM/mo	€3,500 + €900/mo

Always present all three tiers. Most buyers choose the middle one, and the top tier makes the middle look reasonable.

■ Objection handling

Objection	Answer
"Too expensive."	"A part-time human receptionist costs more than the 1,027 KM minimum net wage. This is 350 KM and works around the clock. One extra patient a week pays for it."
"AI looks fake."	Show the sample. Offer hybrid videos that mix their real footage with AI shots. Keep their faces and products real.
"I can do this myself with ChatGPT."	"You can. A good 30-second ad takes many failed attempts; the \$2,000 Kalshi ad needed 300–400 generations. You pay me to skip the learning curve and get a finished file in 3 days."
"Let me think about it."	"Of course. Let's do a 14-day pilot, or I'll make the first video, and you pay only if you post it."
"Customers will hate AI."	"We disclose it where the rules require it and use it where it helps, like product shots and promos, not fake testimonials."
"What if the bot says something wrong?"	"It only answers from your approved price list and FAQ, hands difficult calls to your staff, and you see every transcript."
"My nephew does our Instagram."	"Great, keep him for daily posts. I'll do the one thing he can't: cinematic ads. He can post them."
"Do you have references?"	Show the spec work, offer the pilot, and offer a refund if the first delivery misses the brief.
"Is it legal?"	"Yes, on paid plans with commercial rights. I give you a rights summary with every delivery."

How to close. Ask five discovery questions: goal, current marketing, budget, decision-maker and deadline. Then:

1. Present all three tiers.
2. Take **50% upfront**.
3. Sign a one-page agreement covering scope, revisions, usage rights, AI disclosure and a 30-day exit clause.
4. Deliver within 72 hours.
5. Ask for a testimonial and two referrals.

Worked income scenarios: 1,700 KM to 12,900 KM a month

Two quick formulas to start: **5 local clients × 500 KM a month = 2,500 KM (€1,278)**, and **3 foreign clients × \$1,000 = \$3,000 (€2,610 ≈ 5,100 KM)**. The full scenarios:

Line	Conservative (month 6)	Realistic (month 6)	Aggressive (months 9–12)
Local retainers	3 × 400 KM = 1,200 KM	4 × 550 KM = 2,200 KM, + 1 receptionist at 350 KM	6 × 700 KM = 4,200 KM
Local one-offs	A website every second month ≈ 600 KM	—	—
Foreign / diaspora	—	\$1,200 ad retainer + €400 receptionist	3 × \$1,500 retainers
Products	—	—	Low-ticket funnel ≈ \$2,057 net
Revenue	€920 (1,800 KM)	€2,748 (5,375 KM)	€7,852 (15,357 KM)
Tool stack	€65	€215 (starter + extra credits + voice usage + n8n)	€435 (growth stack + usage)
Freelance help (editor or VA)	—	—	€800
Profit before tax	€855 (1,673 KM)	€2,533 (4,954 KM)	€6,617 (12,942 KM)
Tool ROI ((revenue – tools) ÷ tools)	13.2x	11.8x	17.1x
Compared with the average net wage (1,706 KM)	~1.0x	~2.9x	~7.6x

In every scenario the tools cost under 8% of revenue. **Foreign clients are the lever:** the realistic case gets more than half its revenue from just two non-Bosnian clients. The aggressive case also needs help with delivery, which is why it includes a freelancer line. These are planning scenarios built on the assumptions stated throughout this report. They are not promises. Nobody publishes income data for beginners in this field.

Of five Skool communities, one is worth joining now

All five are creator-run groups, and **none is an official company community**. Two of the URLs you gave, skool.com/higgsfield and skool.com/ai-cash-skool, did not appear in any search index. The closest matches were **skool.com/higgsfield-7889** and **skool.com/ai-cash-skool-6017**. They may be the same groups under vanity URLs, so check before paying. All prices and member counts are snapshots that move.

Community	Owner and track record	Price (snapshot)	What it teaches	Verdict
Ai Filmmaking (skool.com/film-making)	Jamie Heinrich: a real film career from 1994, IMDb credits, an LA commercial production company (IMDb ; VoyageLA)	\$7/mo ("going up to \$50 soon"), ~6.1K members (Skool)	Story, structure, AI sound design, visuals, client work. Upsell: \$97/mo Premium on AI film ads (Skool)	Join now. Best value, with fundamentals that outlast the tools. A third-party review rated it 4.2/5 (Skoolmakers). Skip Premium until you have clients
Higgsfield Lab (skool.com/higgsfield-7889)	Ania Melnik, designer and art director with design awards (Awwwards). Claims such as "4,000+ students" are unverified. Not run by Higgsfield , which doesn't list Skool among its official channels (Higgsfield)	Not found; ~160 members	An 8-week path "from first clip to client retainer": camera moves, storyboards, variants, delivery system, retainer offer templates (welcome post)	Maybe, after the free option. Use Higgsfield's free Creator Workflow Lab on Discord first (lab.higgsfield.ai). Join only if the price is modest
AI App Builders (skool.com/aiapps)	Chris Ashby, product designer; his "50+ startups" claim is unverified	9–49/mo (snapshots conflict), ~355 members (Skool)	Claude Code, Cursor, "Ship in 7" and "Sell in 30" challenges, app design	Later, if you choose apps. A 30-day guarantee is reported by a third party (AcademyGems). Testimonials like "\$17k in 72 hours" are unverified
AI Leverage Lab (skool.com/leverage-lab)	Jason Cooperson, content creator; audience claims (~131K–184K Instagram followers) are self-reported (YouTube about)	\$75/mo , 492 members on one page versus 264 on another (Skool)	AI-automated video editing, a viral content system, automation templates, two calls a week	Only if you are building a personal content brand. The most expensive of the five, and its model depends on growing an audience
AI Cash Skool (skool.com/ai-cash-skool-6017)	Chunquita Hicks, AI educator; thin public footprint	\$14/mo, ~1.8K members (Skool)	AI twins, AI music, affiliate marketing, vibe coding; Premium adds a resale "product vault" and a 50% affiliate commission	Skip. Broad and shallow, "all sales are final", and it pays members to recruit members

Two patterns stand out:

- **The owners' most reliable income is the community itself.** Price × members gives an upper bound of roughly **43K/month** * * **for Ai Filmmaking** and * * **37K** for Leverage Lab ([Profitable.app method](#)).
- **Independent reviews barely exist.** Each group's on-platform rating rests on 4–26 reviews.

Many Reddit complaints about Skool concern individual communities: fake refund promises, and members banned after disputing a charge ([Tools4Skool](#)).

Budget at most **7–50 a month** for communities in your first 90 days. Before paying, check the refund policy in writing.

Ninety days from zero to recurring revenue

Days	Focus	Actions	Target by the end
1–7	Setup and niche	Pick one local niche (for example restaurants and tourism in your city) and one foreign lane (AI ad variants for e-commerce). Buy the Day-1 stack (€49). Join Ai Filmmaking (\$7). Practise daily with the 50 free Flow credits. Build a spreadsheet of 100 local prospects: name, Instagram, phone, Google rating, review count	100 prospects listed; 5 practice clips
8–14	Proof	Make three spec pieces: a cinematic ad for a real local business from its public photos, a UGC-style ad for a foreign product, and a 30-second tourism promo for your city with a German voiceover. Publish a one-page portfolio. Write your Start, Rast and Pro price sheet	Portfolio live; 3 samples
15–30	First money	Send 10 personalized messages a day, plus 2 walk-ins, with free samples for your top prospects. Ask 10 people in your network for introductions. Upgrade to Higgsfield Plus when the first client says yes. Deliver in 72 hours and get a testimonial. Meet an accountant about RS versus FBiH registration	1–2 paying clients, 500–1,000 KM
31–45	Recurring	Convert one-off jobs into monthly packs. Add the live ChatGPT visibility audit as a door-opener. Build a Bosnian-language receptionist or WhatsApp demo for one clinic type, and record a 90-second Loom	2–3 monthly clients
46–60	Foreign lane	Send 5 messages a day to diaspora-owned DACH businesses and e-commerce brands. Open an Upwork or Fiverr profile with 3 fixed-price offers. Enter Chroma Awards Season 2 (closes 31 Dec 2026). Start one attention channel, such as "AI na našem jeziku", posting 3 times a week	3–4 recurring clients, ~1,500–2,500 KM/month; first foreign proposals out
61–75	Systems	Write templates for the brief form, shot-list prompt, delivery checklist and rights summary. Raise prices 20–30% for new clients. Set up a EUR account and a Gumroad or Polar account	Price increase live; second payout rail
76–90	Scale and attention	Close your first foreign client at €500 or more. Launch a small product (a 19–29 KM BCS prompt pack, or an English \$17 pack with a \$9 bump) using ManyChat comment-to-DM. Review your numbers: reply rate, close rate, revenue per client, hours. Then decide whether to double down or switch niche	5–7 clients, 3,000–5,000 KM/month (realistic); conservative ~1,500 KM; aggressive 8,000+ KM

Hype, rules and risks to price in before you start

Claim you will hear	What the evidence says	What to do
"Members made \$17k in 72 hours" or "\$200 → \$9k MRR"	Seller-page testimonials, unverified (Skool)	Discount every testimonial; ask for proof
"AI agency owners make \$10k+/month"	Teachers' verifiable income is community fees. Liam Ottley's revenue claims rose from \$3M to \$18M with no audit, and his accelerator faces refund complaints ([RealHustleIndex](https://realhustleindex.com/reviews/aaa-accelerator/)). Gumroad sells "\$8,499 retainer" blueprints (Gumroad)	Learn from free material; don't buy hidden-price accelerators
"AI UGC beats human creators, 3.5x ROAS"	Vendor data; humans still win on trust-heavy offers (Segwise)	Sell paid tests, not promises
"GEO will flood you with ChatGPT traffic"	AI referrals are about 0.3–1% of traffic (SE Ranking)	Sell visibility and leads, not traffic
"AI channels earn \$4M a year"	Modelled estimates for 2% of top channels; YouTube terminates slop (Kapwing)	Add real human value; diversify income
"AI influencer makes €10k/month"	Agency claims from 2023; the solo money is mostly adult-adjacent	Use personas as traffic engines, labelled as AI
"Order bumps add 30%+"	SamCart's own example shows ~9.7% (SamCart)	Plan on 10–20%

Other risks to plan for:

- **Vendor risk.** OpenAI shut down Sora within months of launching its app ([NBC News](#)), so never build on one model. Higgsfield changed its plans at least three times in 2026.
- **Quality and backlash.** Coca-Cola's AI holiday ad drew "AI slop" backlash over trucks with inconsistent wheels ([NBC Bay Area](#)). Check hands, text and product details on every frame.
- **Platform risk.** Most creator funds are closed to BiH residents.
- **Payment risk.** Few rails work from BiH.
- **Tax visibility.** Banks report account turnover to the tax authorities on request.
- **Legal exposure.** EU AI Act disclosure, the FTC fake-testimonial rule, GDPR for EU clients' data, and an unresearched BiH data-protection law.

Finally, this report rests on **web-search summaries**, because vendor pages and community sites could not be opened during research. **Re-check every price on the vendor's page** before you buy or quote, and treat every income figure as a planning assumption, not a forecast.

Conclusion

Bosnia's advantage isn't cheap labour. It is a **rare combination**: native Bosnian, Croatian and Serbian plus English or German, the EU's time zone, tools that cost less than a dinner out, local markets where almost no one sells AI services yet, and a two-million-strong diaspora that links you to clients paying three to five times local rates. Whoever pairs AI production with **taste and selling**, the skills tutorials don't teach, captures most of that gap. Tool knowledge goes stale within months; the skills to write a hook, pick the best take, and close a deal compound over time.

The order matters more than the idea. **Start with services, because cash comes in weeks. Add attention assets once services pay the bills. Add products last, once you have an audience.** Most beginners do it in reverse: they buy a course, start a faceless channel, and wait. Make your first video for a real business this week, put a price on it, and let paying clients decide which of these 53 ideas becomes your business.
